### MOSCOW METRO WELCOMES NEW TRAIN

*(Integral Design & Development has collaborated with Metrowagonmash in this project)*

03 Feb 2017

RUSSIA: The first of 96 eight-car trainsets that Moscow Metro ordered from **Metrowagonmash** in 2014 has arrived in the Vykhino depot.

The prototype 81-765 set comprises two powered driving cars, four powered trailers and two unpowered trailers, with 24 170 kW traction motors giving a maximum speed of 90 km/h. The 155 m long trainset has 338 seats and capacity for 2 064 standing passengers. The stainless steel bodied vehicle has four double doors per car, walkthrough gangways, wheelchair spaces and USB sockets.

Deliveries of the new fleet are due to take place at a rate of 24 trains per year. They would enable the withdrawal of older rolling stock, including the EZh-3 and Em-508T models on Line 7, dating from the mid-1970s. The contract signed on December 25 2014 includes 30 years of maintenance.
